

# NEWS SPLASH

**SUMMER 2011**

**Christmas & New Year Close-down**—Our offices will be closed from 12.00 noon on Thursday 22nd December and will reopen on Monday 16th January 2012.

**SPLASH Monitoring lobby displays.** We are receiving great feedback regarding our “Lobby Displays” which have been installed in schools, universities, educational, local authority and corporate reception and lobby areas as well as libraries and Swimming pools. The displays have proven popular and provide both education and marketing. Maximise the marketing potential of installing solar water heating or other renewable energy systems. “Is your lobby a place where people wait or where people learn”... install a SPLASH. The photo above shows a SPLASH lobby display on the observation deck of the Sky Tower in Auckland. There are a range of branding options available to personalize your “Lobby Screen”, contact us for details.

**We thank all our customers and suppliers for their assistance during 2011, wish all a Merry Xmas and a Happy New Year and look forward to seeing you all in the New Year.**

The Energy Conscious Design and the SPLASH Monitoring teams have been involved in some great projects this year including;

- TISEC—SPLASH Monitoring is monitoring the new EcoSolar water heating system in Tauranga’s new indoor venue.
- Papamoa School—five solar systems are being monitored at this new school. SPLASH is providing monitoring and education.
- Fonterra Dairy Shed—SPLASH Monitoring was engaged by Vector to provide monitoring and promotional animations for both solar water heating and photovoltaic systems on the Te Rapa Dairy site.
- BRANZ— SPLASH Monitoring is being used to monitor the new EcoSolar water heating system at the new BRANZ buildings in Wellington. A LCD monitor showing SPLASH is being installed in the BRANZ reception area.

**SPLASH on three 50 inch touchscreens at VUW University**

**New SPLASH Photovoltaic Library animation**

SPLASH Monitoring has experienced significant growth this year both within NZ and overseas, offering new features, supporting additional solar controllers and inverters and has an expanding customer base with more solar suppliers choosing to install SPLASH Monitoring on their installations. We are also working with multiple manufacturers to provide SPLASH Monitoring straight from their controllers or inverters. Look out for this in 2012.

**Now over 50 standard animations**

Customers can now choose from over 50 standard animations including solar water heating, swimming pool heating, photovoltaic, heat pumps, hydro generators, wind turbines as well as indoor air quality. There are also animations for schools, libraries, swimming pools and even dairy sheds. Alternatively, you can have our in-house animators generate a site specific animation to match your requirements.

**“SPLASH in a BOX”**

Use SPLASH Monitoring to diagnose faults, assist in commissioning or to provide temporary data logging. Supplied in a case, “SPLASH in a BOX” data logging is quick and easy to install and data is available instantly over the internet on your web-enabled mobile phone. It has already proven to significantly reduce time taken to trouble shoot or commission extensive or complex systems. Contact the SPLASH Monitoring team for more information.
